## EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

72-002 - Employment, Earnings and Hours - Monthly - Price \$4.00 per year

(Industry of area index numbers of employment and payrolls, averages of weekly earnings, salary and wages, averages of hours per week and hourly earnings; historical comparison; charts and explanatory material).

72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year

(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).

72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$3.00 per year

(Estimates of total numbers of employees, with comparisons with a month and a year earlier).

72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.50

(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).

72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price \$1.50

(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, over a lengthy period; charts and explanatory material).

72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents

(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).

72-206 - Seasonally - Adjusted Employment Indexes, January 1961 - December 1970 - Price \$2.00

(Industry and area index numbers of employment: unadjusted, final seasonal factors, seasonally - adjusted and MCD moving average; average weekly hours and hourly earnings).

72-502 - Labour Income, 1926-58 - Price 75 cents

(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).

72-508 - Estimates of Employees by Province and Industry, 1961-68 - Price 50 cents

(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).

72-510 - Labour Costs in Manufacturing 1968 - Price \$1.50

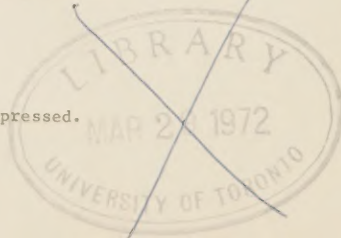

72-511 - Labour Costs in Canada, Mines, Quarries and Oil Wells 1969 - Price \$1.50

(Estimates of selected employer Labour Costs, by industry group and area - Report prepared jointly by labour Division of D.B.S. and Economics and Research Branch of the Canada Department of Labour).

In addition to the selected publications listed above, the Dominion Bureau of Statistics publishes a wide range of statistical reports on Canadian economic and social affairs. A comprehensive catalogue of all current publications is available free on request from the Dominion Bureau of Statistics, Ottawa, K1A 0T6

 <u>Notes</u>	
Methodology and Scope of Monthly Surveys of Employment and Average Weekly Wages and Salaries .....	i

## 1. Introduction

Statistics in this report are based on the results of monthly surveys of employment, payrolls and man-hours published in "Employment and Average Weekly Wages and Salaries", catalogue No. 72-002(1). The annual averages are weighted in the sense that they are derived from the twelve months' aggregated employment and payroll figures and not by adding together the monthly indexes or averages. Explanatory notes at the back of this publication describe concepts, definitions, classification and coverage.

## 2. Employment

The 1970 industrial composite index of employment at 127.1 (1961 = 100), was just 0.2 per cent above its 1969 level, a much smaller change than the year-over-year increase of 3.4 per cent recorded in 1969. Among the industry divisions, increases were recorded in mining, services, finance, insurance and real estate, trade, and transportation, communication and other utilities. The remaining industry divisions registered declines. Regionally, increases were recorded in British Columbia (1.3 per cent) and Ontario (0.5 per cent), and decreases in the Prairie Region (0.2 per cent), Quebec (0.5 per cent) and the Atlantic Region (0.9 per cent). In 1969, all regions had experienced gains in employment ranging from 1.9 per cent in Quebec to 6.8 per cent in British Columbia.

In manufacturing, the index of employment fell 1.9 per cent to 122.8 from the previous year's level of 125.2 and was only 0.6 per cent above the 1968 level. This decline was shared by both durables (2.9 per cent) and non-durables (1.0 per cent). Following a gain of 3.8 per cent in 1969 the decline of 2.9 per cent in 1970 in durables represented a greater fluctuation than in non-durables, which advanced 1.3 per cent in 1969 and dropped 1.0 per cent in 1970. Transportation equipment experienced a large decline (8.9 per cent) in employment mainly due to the effects of industrial disputes. Primary metals showed a reversal from last year's movement as employment climbed 5.9 per cent in 1970 after having declined by 1.9 per cent in 1969. In wood products, on the other hand, the 1970 employment index dipped 4.3 per cent after recording a 4.2 per cent gain in the preceding year. Electrical products also registered a similar movement, showing a decline in 1970 (4.1 per cent) following an increase (4.7 per cent) in 1969. Among the components of non-durables manufacturing for which data are given in Table A, textiles and paper products registered declines of 5.1 per cent and 0.5 per cent respectively; food and beverages and clothing maintained their 1969 levels and chemicals recorded a slight (0.1 per cent) gain.

The index of employment for construction fell 4.4 per cent in 1970 from the 1969 level of 119.1. The decline was shared by both the building and engineering components. In engineering, the employment index dipped 4.8 per cent in 1970 following a 5.9 decrease in 1969. In the building component, employment was 4.2 per cent below the 1969 level; in the preceding year the index had shown a 2.4 per cent upward movement.

The forestry index recorded a decline for the fourth consecutive year. The 1970 index dropped 5.1 per cent, almost twice the decline recorded in 1969.

In mining the index of employment showed a 7.2 per cent increase in 1970. In the preceding year this index had declined 1.7 per cent mainly due to industrial disputes in this industry. Over the two-year period from 1968 to 1970, the mining index advanced 5.4 per cent.

The index of employment in services reached 178.5 in 1970, up 3.9 per cent from 1969. Although the upward trend was maintained, the rate of increase was considerably smaller than a year ago when the index climbed 8.9 per cent. The largest increase since 1961 was 10.5 per cent recorded in 1966.

Employment in finance, insurance and real estate increased 3.5 per cent in 1970. The pace of growth in employment was relatively higher in 1969 when this industry registered a 5.6 per cent increase over the year, the largest increase since 1961.

In trade, the 1970 index of employment at 139.3 was 2.0 per cent above the 1969 level. Over the last two years, the index showed a gain of 7.1 per cent.

Transportation, communication and other utilities index of employment showed a small (0.6 per cent) gain in 1970 compared to a 2.2 per cent recorded a year ago.

(1) The title of this publication has now been changed to "Employment, Earnings and Hours", Catalogue No. 72-002.

### 3. Average Weekly Wages and Salaries

Average weekly wages and salaries for the industrial composite were \$126.82 in 1970, 7.8 per cent above the 1969 level of \$117.63. This annual percentage increase in average weekly wages and salaries was not only larger than last year's increase (7.1 per cent) but also the largest recorded during the past ten years. The Atlantic Region (9.4 per cent), Ontario (8.2 per cent) and the Prairie Region (8.0 per cent), experienced gains exceeding the Canada average of 7.8 per cent. British Columbia and Quebec, on the other hand, recorded relatively smaller increases in average weekly wages and salaries - 6.7 per cent and 7.1 per cent, respectively.

Average weekly wages and salaries advanced in all industry divisions. The largest increase in 1970 occurred in construction (10.9 per cent or \$16.47). In the preceding year also, construction (along with forestry) had recorded the largest gain in average weekly wages and salaries. Average weekly wages and salaries in construction therefore reached \$167.15 in 1970 - highest among all the industry divisions. In trade (7.1 per cent), finance, insurance and real estate (5.9 per cent) and forestry (3.0 per cent), increases in 1970 were lower than those recorded in 1969. In mining, average weekly wages and salaries were \$164.70 in 1970, up 10.6 per cent from 1969. Average weekly wages and salaries in manufacturing reached \$132.75 (up 8.0 per cent) in 1970, with durables at \$142.87 and non-durables at 123.27. Durables as well as non-durables components of manufacturing recorded almost uniform gains - 8.0 per cent and 8.1 per cent respectively. Transportation, communications and other utilities showed average weekly wages and salaries at \$142.35, 8.6 per cent above the 1969 level. In services, the gain over-the-year amounted to \$6.42 (7.6 per cent), reaching \$90.65 in 1970.

TABLE 7. Average Weekly Wages and Salaries, by Industry, for Urban Areas, 1968-70 by Months - Concluded

## NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

### The Reporting Unit

The reporting unit is usually the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

### Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

### Definitions

#### Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

### Employment

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

### Average Weekly Wages and Salaries

The wages and salaries are derived from payrolls which include gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

### Organization of Data

#### The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls. The statistics first published for each month are advance which are re-tabulated to appear in the subsequent month as preliminary data and in the month following as revised or final data. The re-tabulation of data in the two succeeding months permits incorporation of corrections, retroactive pay and data received late for inclusion in the advance and preliminary stages of tabulation. Data in this publication incorporate some revisions and therefore supersede those published in the monthly publications.

#### Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite — The sum of the industries tabulated

Durable goods manufacturing — The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing — The sum of the remaining manufacturing industries

Building — The sum of general contractors and special trade contractors

Engineering — The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

### Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

### Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment in establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

### Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.
